 siraajul

 Dhaka, Bangladesh

Profile

I am an inquisitive SQA engineer who thrives on learning and tackling new challenges in software automation and development. My journey includes significant experience in manual and automated testing, where I aim to positively contribute to my team with strong management, decision-making, and communication skills. Excited to collaborate and turn innovative ideas into reality.

Professional Experience

Junior Software QA Engineer

GeekSSort

05/2025 – 11/2025 | Mirpur, Dhaka

- Developed and executed manual test plans (functional, regression, exploratory), identifying critical issues early in the sprint.
- Performed cross-browser and cross-device testing to ensure consistent user experience on web and mobile.

Software Engineer

TripNao

03/2024 – 10/2024 | Rayerbag, Dhaka

- Served full-time at TripNao, a Bangladeshi startup focused on ride-sharing and expanding into travel, resort, and hotel booking services.
- Built the WordPress-based MVP as the sole developer, including event-booking features, enabling rapid launch and early user engagement.

Software Engineer Intern

Astha IT

11/2023 – 02/2024 | BanglaMotor, Dhaka

- Independently designed and developed mobile solutions as an Intern Mobile Software Engineer.
- Skilled in Flutter and Dart, with hands-on experience building a fully functional restaurant booking app using state management and REST API integration.

Projects

Manual E Commerce Testing Template

- Developed a complete manual e-commerce testing template covering core user flows and checkout processes.
- Created structured test cases and bug-tracking sections to improve testing accuracy and documentation.

Book API Load Test By JMeter

Performance testing project for Book API

- Completed performance testing for Book API users using JMeter under various scenarios

Transaction API Testing Using POSTMAN

API testing project focused on the Demoney platform

- Completed API testing for Demoney website using Postman under various scenarios

DemoQa Website Automation Using JUnit

Automation project for the DemoQa website using JUnit

- Automated the DemoQa website using JUnit covering various actions like textbox input, alerts, and keyboard events
